

Car rental

This concept of a Car rental will let a user pick out a car for a certain period of time. There will be a selection of cars to choose from. The user can pick from 3 categories of cars. Small, big and utility.

The user will have an option to buy insurance for the vehicle of choice. Utility vehicles will be mandatory to insure. The user can pick from different insurances.

A deposit of 100 euro will be taken from the user when they rent a car. The deposit will be given back if the vehicle is returned with at least $\frac{1}{4}$ of the tank.

Requirements

As a customer I would like to be able to register for a system so that my details can be saved which makes using the system easier and faster.

As a customer I would like to be able to login into the system with my details so that I am able to use the system to reserve a vehicle.

As a customer I would like to be able to leave a review and see the systems average score so that I can see if the system that I will use has a good reputation.

As a customer I would like to reserve a vehicle so that I know that the vehicle will be available for me at the time I have reserved it.

As a customer I would like to be able to choose between insurances so that the car I rent can be insured.

As a customer I would want to be able to be able to pick up the vehicle at any time during my rented period so that I have freedom of when I can pick up the vehicle

As a customer I would like an easy way to return the vehicle so that I can receive my deposit back if I bring back the vehicle in good condition.

As a customer I would like to be able to sort and filter through available vehicle so that I can easily find a vehicle within my location and budget range.

Operation:

- Ability for user to choose car
- Ability for user to choose time period
- Ability for user to choose insurance
- Ability for user to return the car
- Ability for user to report a claim
- Ability for user to claim deposit

Scenarios

Use case name: Register		UniqueID: A001
Area: Rental Website		
Actor(s): Customer		
Description: The customer registers their details		
Triggering Event: customer chooses to register		
Trigger type: <input checked="" type="checkbox"/> External <input type="checkbox"/> Temporal		
Steps Performed (Main Path)		Information for Steps
1.customer chooses to register		
2.user inputs their details		Customer
3.the details are saved		Customer
4.CustomerID is created for the DB and customer		Customer
Preconditions: Customer isn't registered		
Postconditions: customer details are saved for login		
Assumptions: customer has valid driver ID		
Requirements met: Customer can register to the system		
Outstanding issues: no confirmation system		
Priority: high		
Risk: high		

Use case name: Login		UniqueID: A002
Area: Rental Website		
Actor(s): Customer		
Description: Customer can login with their ID and password		
Triggering Event: Customer chooses to login		
Trigger type: <input checked="" type="checkbox"/> External <input type="checkbox"/> Temporal		
Steps Performed (Main Path)		Information for Steps
1. Customer Chooses to login		Customer, RentalDB
2. Customer inputs their ID and password		Customer, RentalDB
3. The DB confirms that information matches		RentalDB, Customer
4. Customer is logged into the website		Customer
Preconditions: Customer has registered		
Postconditions: Customer is logged in		
Assumptions: Customer inputs correct information		
Requirements met: allow the customer to login		
Outstanding issues:		
Priority: high		
Risk: high		

Use case name: Reserve Vehicle	UniqueID: A003
Area: Rental Website	
Actor(s): Customer	
Description: Customer reserves a vehicle	
Triggering Event: customer houses a vehicle	
Trigger type: <input checked="" type="checkbox"/> External <input type="checkbox"/> Temporal	
Steps Performed (Main Path)	Information for Steps
1.customer chooses a vehicle	Vehicle
2.customer chooses the length of time to rent	Vehicle, Reservation
3.customer must choose insurance if it's a heavy vehicle	Vehicle, Reservation
4.the vehicle DB is updated	Vehicle, Rental DB
5. Reservation is confirmed	Reservation
6. An invoice is created	Reservation, Invoice
Preconditions: Customer is logged in	
Postconditions: a reservation and invoice is created and vehicle is set to not available	
Assumptions: vehicle is available	
Requirements met: allow customer to reserve a vehicle	
Outstanding issues:	
Priority: high	
Risk: high	

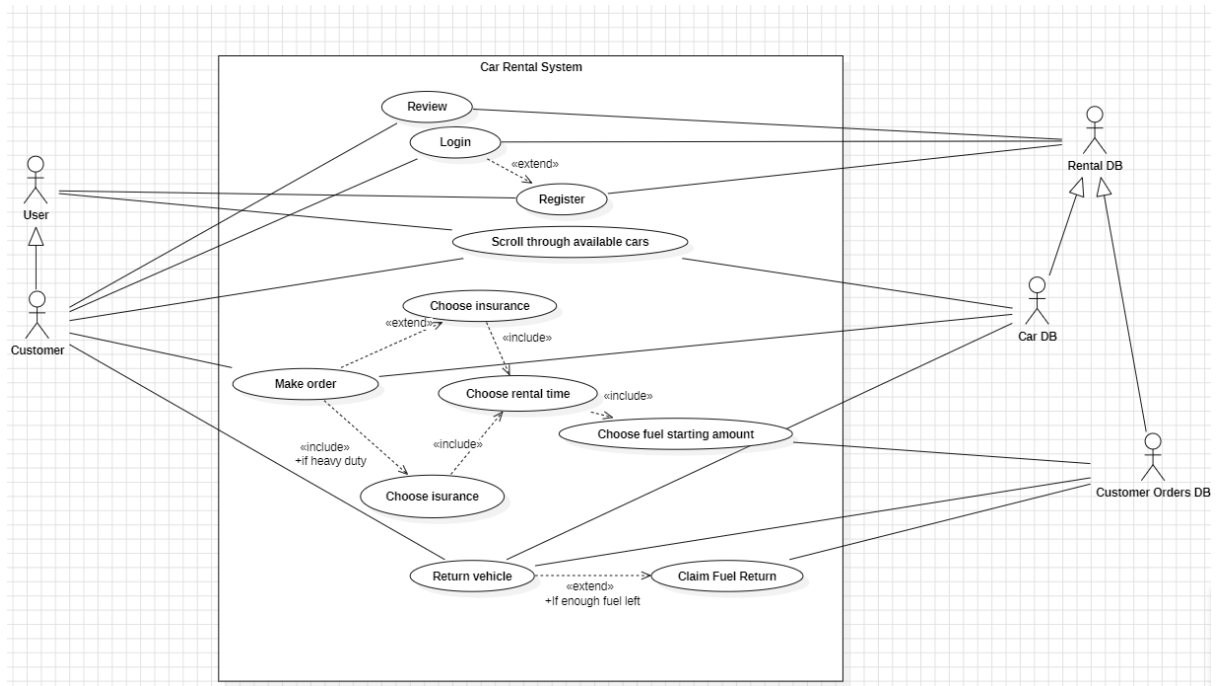

Use case name: Pick Up Vehicle	UniqueID: A005
Area: Rental Website	
Actor(s): Customer	
Description: Customer chooses to pics up their vehicle	
Triggering Event: Customer has chosen their reservation to pickup	
Trigger type: <input checked="" type="checkbox"/> External <input type="checkbox"/> Temporal	
Steps Performed (Main Path)	Information for Steps
1. Customer chooses to pick up their vehicle	Customer, Reservation
2. The DB confirms that the Customer is within the date rented	Reservation
3. Reservation Vehicle state is updated to picked up	Reservation
Preconditions: Customer is logged in and has a reservation	
Postconditions: customer has their reservation vehicle picked up	
Assumptions: customer has paid the invoice	
Requirements met: Customers have their vehicles available from their reservation	
Outstanding issues:	
Priority: high	
Risk: high	

Use case name: Return Vehicle		UniqueID: A007
Area: Rental Website		
Actor(s): Customer		
Description: Customer returns their rented vehicle		
Triggering Event: Customer Chooses to return their rented vehicle		
Trigger type: <input checked="" type="checkbox"/> External <input type="checkbox"/> Temporal		
Steps Performed (Main Path)		Information for Steps
1. Customer Chooses to Return vehicle		Reservation, Customer
2. DB Updates Vehicle status and checks if brought on time		Vehicle, Reservation
3. Return the Customers Deposit		Invoice, Customer
4. Update the DB to remove the reservation		Reservation
Preconditions: Customer is logged in and has a reservation		
Postconditions: vehicle is available on website and customer reservation is complete		
Assumptions: customer returned the vehicle with quarter tank and not late		
Requirements met: Customer can return the car and get their deposit back if quarter full		
Outstanding issues:		
Priority: high		
Risk: high		

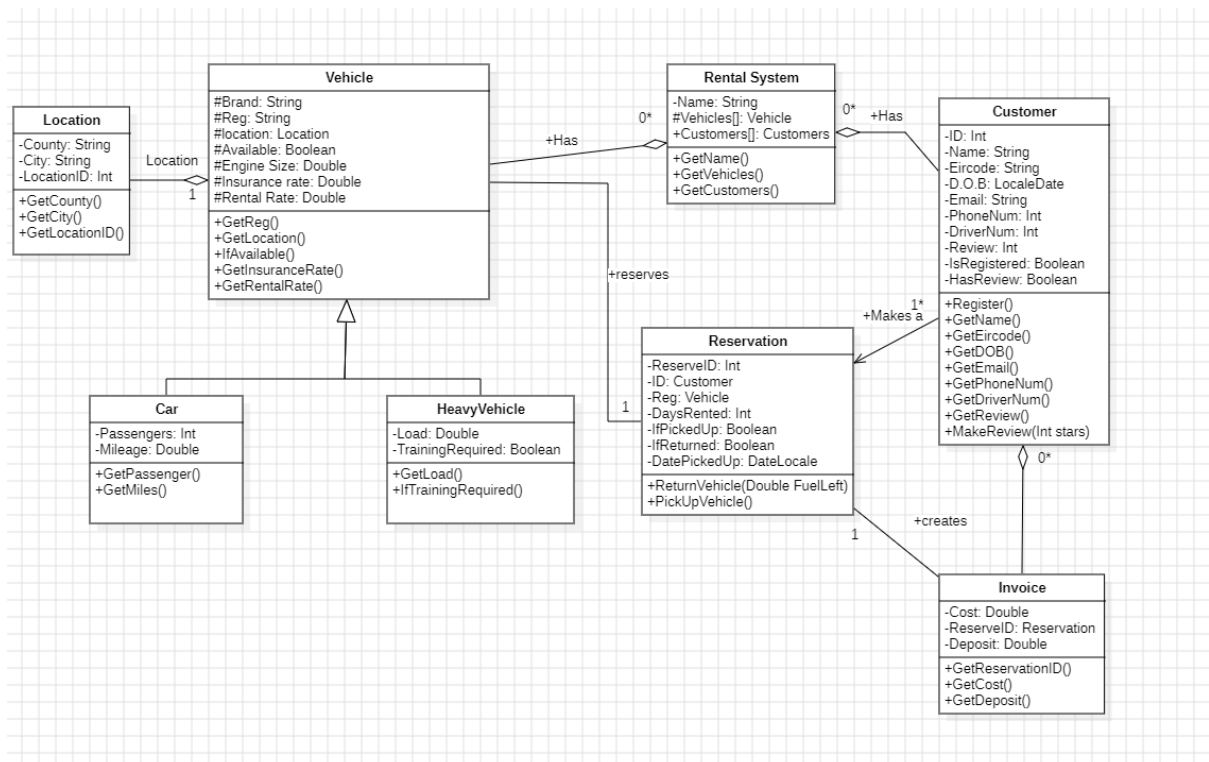

Use case name: Write Review		UniqueID: A008
Area: Rental Website		
Actor(s): Customer		
Description: Customer Can review the Rental Website		
Triggering Event: Customer Chooses to write a review		
Trigger type: <input checked="" type="checkbox"/> External <input type="checkbox"/> Temporal		
Steps Performed (Main Path)		Information for Steps
1. Customer Chooses to leave a review		Customer
2. Customer inputs their review value		Customer
3. DB updates their review		RentalDB, Customer
4. The websites average is recalculated and displayed		RentalDB
Preconditions: Customer is logged in		
Postconditions: The Customers review is updated		
Assumptions: Customer inputs		
Requirements met: Customer can leave a review on the website		
Outstanding issues:		
Priority: low		
Risk: low
